New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders.

Claim 5; Page 29; 473pp; English.

The invention describes an isolated nucleic acid molecule (I) encoding metalloprotease (MP-1). (I) is useful for preventing, treating, or

The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia); metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and renal disease and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid sequence of a metalloprotease MP1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Metalloprotease; MP-1; immune disorder; glutamate transport; cancer; motor neuron disorder; amyotrophic lateral sclerosis; ALS; diabetes; reproductive disorder; Kleinfelter's syndrome; germinal cell aplasia; genital wart; metabolic disorder; premature puberty; Kallman syndrome; Cushing's syndrome; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; Tourette syndrome; sepsis; liver disease; renal disease; immune disorder; rheumatoid arthritis; acquired immunodeficiency syndrome; ADS; pulmonary disease; pneumonia; emphysema; cystic fibrosis; vascular disorder; inflammatory disorder; neurological disorder.
                                                                                                                                    05-FEB-2001; 2001US-0266518P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutamate transport or motor neuron disorder, such as amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and creat diseases and immune disorders (e.g. AIDS, rheumatoid arthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents human O-sialoglycoproteinase-like protein (OSGPLP). The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-MAY-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               O-sialogycoproteinase-like for diagnosing, preventing

                                                                                        S
                                                                                                                              밁
                                                                                                                                                                                                                                                                  श
                                                                                                                                                                                                                                                                                                         The invention relates to an isolated polypeptide comprising: any of 28 csequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acids sequences, 94% identical to a sequence of 703 or 267 amino acids, 96% identical to a sequence of 414 amino ccids, or 97% identical to a sequence of 414 amino ccids, or 97% identical to a sequence of 242 amino acids, all given in CC the isolated polypeptide. The polypeptides and polymucleotides are useful cci in diagnosing, treating and preventing diseases or conditions associated with the decreased expression of protein modification and maintenance cc molecules (PMOD), such as cell proliferative diseases (e.g. AIDS, CC altergies), neurological disorders (e.g. stroke, Parkinson's disease, cepilepsy), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. cendentriosis), developmental, vesicle trafficking disorders, and cc infections (e.g. bacterial, viral, parasitic, protozoal). These are also compounts are useful in screening compounds for effectiveness as agonist cor antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring cor free expression profiles. This sequence represents a human PMOD protein of the invention.
                                                                                                                                                                                                                Query Match

CC Sequences of the invention are useful in diagnosing and treating cancer (or aberrant cellular proliferation and/or differentiation (e.g. colon or CC lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid CC arthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., compocardial infarction, thrombus) including endothelial cell disorders (e.g., psoriasis, Grave's disease), haematopoietic disorders, brain CC disorders (e.g., cerebral oedema, Parkinson's or Alzheimer's disease), considers (e.g., diagnostic disorders (e.g., obesity), liver disorders or platelet CC disorders. They are also useful in socreening assays, predictive medicine (e.g., diagnostic assays, prospective and therapeutic methods. The conclusion may also be used in chromosome mapping, tissue typing and consider of the invention are considered in gene therapy. The present sequence is human glycoprotease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                       밁
                                                                                                                                                 밁
                                                                                                                                                                            S
                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CC 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding CC a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC sequences that encode a human seven transmembrane domain (7TM). The CC 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid and polypeptide CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, cardiovascular disorders, endothelial disorders, heart disorders, CC blood vessel disorders, brain disorders, pain and metabolic disorders, CC liver disorders or platelet disorders. These disorders include carcinoma, CC sarcoma, leukaemia, Hodgkin's disease, autoimmune disorders (CC syndrome, Raynaud's disease, Crohn's disease, Grave's disease, Kawasaki CC syndrome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral cc cachexia or diabetes. This is the amino acid sequence of the novel human crowners are 28479.

                                                                                                                                      The invention relates to an isolated 38650 (encoding adenosine CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7 CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC a sequence which is at least 60% identical to the six nucleic acids or CC naturally occurring variants, or a DNA insert of the plasmid deposited CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included CC are a host cell containing the nucleic acids (used to produce the CC troteins), the encoded proteins, an antibody that selectively binds to CC the polypeptide, and identifying a compound that binds to/modulates the CC activity of the polypeptide. The nucleic acid molecules, polypeptides and CC methods are useful for diagnosing, treating cancer, aberrant cellular CC cardiovascular disorders including endothelial cell disorders, pain CC cardiovascular disorders, liver disorders and platelet disorders pain and metabolic disorders, liver disorders and platelet disorders (many CC examples of these disorders are given in the specification). The present

                                                                                                                                                                                                               The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                               New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-395539/38.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                           Proteins AAY52202-Y52217 encompass a novel family of proteins designated the ygjD family, after the name given to the Escherichia coli family member. These proteins are essential for the survival of both Gram negative and Gram positive bacteria, although no function has as yet been ascribed to these proteins. The ygjD proteins, fragments of ygjD proteins (for example, fragments encompassing one or more conserved ygjD motifs such as AAY52218-Y52284) and nucleotides encoding them can be used to identify antagonists and broad spectrum antibacterial compounds. These antagonists and compounds can be used to treat a wide range of bacterial infections. New antibiotics are urgently needed, as serious bacterial infections and antibiotic resistant strains are becoming increasingly prevalent. The proteins of the invention are essential proteins for bacterial viability, and represent new targets for antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ygjD protein; essential; Gram positive; Gram negative; conserved; motif; identification; antagonist; antibacterial; antibiotic; broad spectrum; treatment; infection; resistance; drug target.

The invention relates to an isolated nucleic acid comprising any one

0f

21-MAR-2002; 2002WO-US009107.

WO200277183-A2

```
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid cenciding a polypeptide whose expression is inhibited by the antisense concleic acid; (4) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the cantisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a omegon required for proliferation, or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation, or that inhibits gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of the strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for clentifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                     CC the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense concleic acid; (4) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide by the containing the vector; (3) an isolated containing the polypeptide; (5) producing the polypeptide; (6) inhibited by the condition or the activity of a gene in an operon required for proliferation; (7) identifying a operon that influences the activity of the gene product or that has an activity against a biological pathway (containing a gene required for cellular proliferation or the biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a compound that inhibits the condition of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required conditions or screening for homologous nucleic acids required conditions or screening for homologous nucleic acids required conditions or screening for homologous nucleic acids required conditions or acroemated acts are sequence attains. Sureus, S. typhimurium, C. pneumoniae or P. aeruginosa. The present sequence attained by one of the target prokaryotic essential genes. Note: The sequence data for this conditions in the probaryotic essential genes. Note: The sequence data for this conditions.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
